NIMCET-Free Test

By Amit Katiyar (MCA;JNU)

21. Minimum number of comparison required to compute the largest and second largest element in an array is

- (a) $n[\log_2 n] - 2$ (b) $n + [\log_2 n - 2]$
(c) $\log_2 n$ (d) $n - [\log_2 n + 2]$

22. Consider the following infix expression: $((A + B) - C * (D/E)) + F$ What is the postfix expression of the above expression?

- (a) $AB + CDE/*-F+$ (b) $AB-CDE*/+F-$
(c) $ABC+DE/*-F+$ (d) $ABC+DE/*+F-$

23. Let A be an array of 31 numbers consisting of sequence of 's' followed by a sequence of 1's. The problem is to find the smallest index i that $A[i]$ is 1 by probing the minimum numbers of locations in A. The worst case number of probes performed by an optimal algorithm is

- (a) 7 (b) 6
(c) 5 (d) 4

24. What is the output of this C program?

```
#include<stdio.h>
int counter 0;
int calc(int a, int b){
    int c;
    counter++;
    if (b==3)
        return (a*a*a);
    else{
        c= calc(a, b/3),
        return (c*c*c);
    }
}
int main () {
    calc(4,81);
    printf("%d", counter);
```

- (a) 4 (b) 5
(c) 6 (d) 10

25. Consider the following infix expression

$$A+(B*(C-(D/E)*G)*H$$

What is the postfix expression of the above expression?

- (a) $AB*CDE-/*G*H+*$
(b) $ABCDE/-*G*H+*$
(c) $ABCDE/*-G+H+$
(d) $ABCDE/-G/*H+*$

26. Identify the odd term amongst the following group:

- (a) optical fiber
(b) co-axial cable
(c) twisted pair cable
(d) microwave

27. To avoid transmission errors, a check figure is calculated by the

- (a) start and stop bit
(b) receiving computer
(c) transmitting computer
(d) both B and C

28. An algorithm is made up of 2 modules M1 and M2. If time complexity of module M1 and M2 are $h(n)$ and $g(n)$ respectively, the time complexity of algorithm is

- (a) $h(n)+g(n)$
(b) $\min(h(n),g(n))$
(c) $\max(h(n), g(n))$
(d) $h(n) * g(n)$

29. A _____ complete sub graph and _____ subset of vertices of a graph $G = (V, E)$ are clique and vertex cover respectively.

- (a) maximal, minimal
(b) maximal, maximal
(c) minimal, minimal
(d) minimal, maximal

30. Consider the following page reference string: 1,2,3,4,2,1,5,6,2,1,2,3,7,6,3,2,1,2,3,6, with 4 page frames. How many page faults occur using the FIFO (First in First Out) and LRU (Least Recently Used) page replacement algorithms?

- (a) FIFO =14, LRU = 9
(b) FIFO =12, LRU = 8
(c) FIFO =13, LRU = 10
(d) FIFO =14, LRU = 10

31. Match the following types of software (List-I) with their functions (List-II).

	List-I		List-II
(I)	Operating System	(A)	Software that manages computer hardware and software resources and provides common services for computer programs.
(II)	Application Software	(B)	Software designed to perform a group of coordinated functions, tasks, or activities for the user's benefit.
(III)	Utility Software	(C)	Low-level software that is programmed directly into a hardware device and is used to control its functions.
(IV)	Firmware	(D)	System software designed to help analyze, configure, optimize or maintain a computer.

- (a) (I)-(A), (II)-(B), (III)-(D), (IV)-(C)
 (b) (I)-(C), (II)-(D), (III)-(B), (IV)-(A)
 (c) (I)-(D), (II)-(B), (III)-(A), (IV)-(C)
 (d) (I)-(B), (II)-(C), (III)-(D), (IV)-(A)

32. Match the following security terms (List - 1) with their definitions (List-II).

	List-I		List-II
(I)	Firewall	(A)	The process of converting information into a secure format to prevent unauthorized access.
(II)	Encryption	(B)	Software or hardware designed to prevent unauthorized access to or from a private network.
(III)	Phishing	(C)	A type of cyber attack aimed at stealing sensitive information like account numbers, banking or credit card details, and usernames/passwords.
(IV)	Malware	(D)	Malicious software intended to harm or exploit any programmable device or network.

- (a) (I)-(A), (II)-(C), (III)-(B), (IV)-(D)
 (b) (I)-(B), (II)-(A), (III)-(C), (IV)-(D)
 (c) (I)-(D), (II)-(B), (III)-(A), (IV)-(C)
 (d) (I)-(A), (II)-(C), (III)-(D), (IV)-(B)

33. Match the following Internet Protocols (List-i) with their functions (List-II)

	List-I		List-II
(I)	TCP	(A)	Routes data packets between devices across different networks
(II)	IP	(B)	Assigns IP addresses to devices on a network dynamically
(III)	DHCP	(C)	Resolves domain names to IP addresses
(IV)	DNS	(D)	Controls the flow of data to ensure reliable transmission

- (a) (I)-(D), (II)-(B), (III)-(A), (IV)-(C)
 (b) (I)-(C), (II)-(D), (III)-(B), (IV)-(A)
 (c) (I)-(D), (II)-(A), (III)-(B), (IV)-(C)
 (d) (I)-(B), (II)-(C), (III)-(D), (IV)-(A)

34. What is the output of the following statement?
 All are integer values.

$$i=7; j=8; k=6;$$

$$i = (i\%4)*(7+(j-2)/(k+1))) = ?$$

- (a) 27 (b) 23
 (c) 21 (d) 0

35. The key characteristics of reduced instruction set computer (RISC) are

- I. variable length instruction formats
 II. single cycle instruction execution
 III. efficient instruction pipeline
 IV. instruction that manipulates operands in memory

- (a) I and II (b) II and III
 (c) I and IV (d) III and IV

36. Which of the following are examples of parallel processing architecture?

- I. SIMD (Single Instruction, Multiple Data)
 II. MIMD (Multiple Instruction, Multiple Data)
 III. SISD (Single Instruction, Single Data)
 IV. MISD (Multiple Instruction, Single Data)

- (a) I and II (b) II and III
 (c) I and IV (d) III and IV

37. Match the following (List-I) with their functions (List-II).

	List-I		List-II
(I)	static char var;	(A)	Sequence of memory locations to store addresses
(II)	m=malloc (10); m=NULL;	(B)	A variable located in data section of memory
(III)	char * ptr [10]	(C)	Request to allocate a CPU register to store data
(IV)	register int varl;	(D)	A lost memory which cannot be freed

(a) (I)-(B), (II)-(C), (III)-(D), (IV)-(A)

(b) (I)-(C), (II)-(D), (III)-(B), (IV)-(A)

(c) (I)-(D), (II)-(A), (III)-(B), (IV)-(C)

(d) (I)-(B), (II)-(D), (III)-(A), (IV)-(C)

38. Consider socket API on a Linux machine that supports connected UDP sockets. A connected UDP socket is a UDP socket on which connect function has already been called. Which of the following statements is/are CORRECT?

I. A process can successfully call connect function again for an already connected UP socket.

II. A connected UDP socket can be used to communicate with multiple peers simultaneously.

(a) I only

(b) II only

(c) Both I and II

(d) Neither I nor II

39. Which of the following is/are shared by all the threads in a process?

I. program counter

II. stack

III. address space

IV. registers

(a) I and II

(b) III only

(c) IV only

(d) ff and IV

40. A thread is usually defined as a "light weight process because an operating system (OS) maintains smaller data structures for a thread than for a process. In relation to this, which of the followings is TRUE?

(a) The OS does not maintain a separate stack for each thread

(b) On per-thread basis, the OS maintains only CPU register state

(c) On per-thread basis, the OS does not maintain virtual memory state

(d) On per thread basis, the OS maintains only scheduling and accounting information

41. K4 and Q3 are graphs with the following structures

K4

Q3

Which one of the following statements is TRUE in relation to these graphs?

(a) K4 is planar while Q3 is not

(b) Both K4 and Q3 are planar

(c) Q3 is planar while K4 is not

(d) Neither K4 nor Q3 is planar

42. What does the following fragment of C-program print?

```
#include <stdio.h>
int main()
{
    char c[] = "2025-26";
    char *p = c;
    printf("%d", p[3]-[1]);
    return 0;
}
```

(a) 2025-26

(b) 25-26

(c) 6

(d) 5

43. Which of the following statements is true for a clustered index in a relational database?

(a) A clustered index can have multiple NULL values in a column.

(c) A clustered index is always faster than a non-clustered index

(b) A clustered index determines the physical order of data rows in a table.

(d) A clustered index can be created on multiple column only if they are unique

44. Arrange the following phases of database design in the correct order:

I. Physical Design II. Conceptual Design

III. Logical Design IV. Requirement Analysis

(a) II, IV, I, III

(b) III, I, II, IV

(c) IV, II, III, I

(d) I, IV, III, II

Answer Key

Scan the QR & Download Our App Now.

45. The employee salary should not be greater than Rs. 15000, this is
(a) integrity constraint
(b) referential constraint
(c) over defined constraint
(d) feasible constraint
46. Which normal form is considered adequate for relational database design?
(a) 2 NF (b) 3 NF
(c) 4 NF (d) BCNF
47. Which of the following are correct SQL statements for creating a table?
I. CREATE TABLE table_name (column1) datatype, column2 datatype),
II. CREATE TABLE table name (column1), column2, column3k
III. CREATE TABLE table_name (column1) INT PRIMARY KEY, column2 VARCHAR (50));
IV. CREATE table name (column1) datatype, column2 datatype),
(a) I and II (b) II and III
(c) and III (d) IV only
48. Which of the following SQL. command can be used to remove a table from a database?
I. DELETE II. DROP
III TRUNCATE IV. REMOVE
(a) I and II (b) I and III
(c) II and IV (d) IV only
49. Which of the following are valid aggregate functions in SQL?
I. AVG() II. MAX ()
III. ALL () IV. COUNT()
(a) I, II and III (b) II, III and IV
(c) I, II and IV (d) All
50. The transport layer protocols used for real time multimedia, file transfer, DNS and email, respectively are
(a) TCP, UDP, UDP and TCP
(b) UDP, TCP, TCP and UDP
(c) UDP, TCP, UDP and TCP
(d) TCP, UDP, TCP and UDP
51. The worst-case time complexities of heap sort for n numbers and the addition of two $n \times n$ matrices are respectively are
(a) $O(n \log n)$ and $O(n^2)$
(b) $O(n^2)$ and $O(n \log n)$
(c) $O(\log n)$ and $O(2^n)$
(d) $O(2^n)$ and $O(n^2)$
52. What is the main difference between Alpha Testing and Beta Testing?
(a) Alpha testing is done by the development team, while beta testing is done by end-users
(b) Alpha testing is done by end-users, while beta testing is done by the development team.
(c) Alpha testing is done in a controlled environment, while beta testing is done in a real-world environment
(d) Alpha testing is done after beta testing to identify any remaining issues.
53. Which cache replacement policy is most commonly used in modern processors?
(a) First-In-First-Out (FIFO)
(b) Least Recently Used (LRU)
(c) Random Replacement
(d) Least Frequently Used (LFU)
54. Given a 16-bit 2's complement number, what is the range of representable integers?
(a) -65535 to 65535
(b) -65536 to 65535
(c) -32767 to 32767
(d) -32768 to 32767
55. A BCD (Binary Coded Decimal) code represents each decimal digit with a 4-bit binary code. What is the BCD code for the decimal number 97?
(a) 11100101
(b) 1001 0101
(c) 1001 0111
(d) 11100111

56. Arrange the given steps required for a Direct Memory Access (DMA) transfer in the correct order.

- I. Initiate DMA transfer request
- II. Transfer data directly between peripheral and memory
- III. Processor grants DMA control over the system bus
- IV. DMA controller completes data transfer and signals completion

- (a) I, III, II, IV (b) I, IV, II, III
(c) III, II, I, IV (d) I, II, III, IV

57. Which of the following is a valid long literal

- (a) 904423 (b) 0xnf029L
(c) L990023 (d) ABH8097

58. What will be the output of the following program?

```
public class Test {
    public static void main(String[] args) {
        int count = 1;
        while (count <= 15) {
            System.out.println(count % 2 == 1 ?
                "AMU" : "MCA");
            ++count;
        } // end while
    } // end main
}
```

- (a) 15 times AMU
(b) 15 times MCA
(c) 8 times AMU and 7 times MCA
(d) 14 times AMU and 14 times MCA

59. What will be the output of the following program?

```
public class Solution {
    public static void main(String[] args) {
        int[] x = {120, 200, 016};
        for (int i = 0; i < x.length; i++) {
            System.out.print(x[i] + " ");
        }
    }
}
```

- (a) 120 200 14 (b) 120 200-016
(c) 120 200 16 (d) None/Error

60. What will be the output of the following program?

```
public class Main {
    public static void main(String[] args) {
        String str = "TATA";
        str = "Bye Bye";
        System.out.println(str);
    }
}
```

- (a) TATA TATA (b) FATA Bye Bye
(c) Bye Bye (d) None

61. Given a disk with 1000 cylinders numbered from 0 to 999, calculate the total number of tracks the disk arm must move to service all requests in the disk queue using FIFO and SCAN scheduling algorithms. Assume the last serviced request was at track 345, with the disk head currently moving toward track 0. The disk queue (in FIFO order) contains requests for the following tracks: 123, 874, 692, 475, 105, and 376.

- (a) FIFO = 2013, SCAN = 1507
(b) FIFO = 2013, SCAN = 1298
(c) FIFO = 1967, SCAN = 2013
(d) FIFO = 2013, SCAN = 1219

62. On a simple paging system with 2^{24} bytes of physical memory, 256 pages of logical address space, and a page size of 2^{10} bytes, how many bits are in logical address?

- (a) 16 bits (b) 34 bits
(c) 14 bits (d) bits

63. Consider a page size of 2000 bytes, and the following page table

In/out	Frame
in	20
out	22
in	200
in	150
out	30
out	50
in	120
in	101

Which of the following virtual addresses would generate a page fault?

- I. 10451
II. 5421
III. 14123
IV. 9156
(a) I, II and III generate page fault
(b) II and IV generate a page fault
(c) II and III generate a page fault
(d) I and IV generate a page fault

64. Arrange the following steps in the proper sequence for how a DNS (Domain Name System) server resolves a domain name into an IP address.

- I. The DNS server checks its cache for the requested domain name.
- II. If the domain name is not found in the cache, the DNS server queries for root DNS server
- III. The DNS server receives the IP address corresponding to the domain name.
- IV. The DNS server forwards the query to the authoritative DNS server for the domain

The DNS server returns the IP address to the client

- (a) I, II, III, IV, V (b) I, III, V, IV, II
(c) I, II, V, IV, III (d) I, II, IV, III, V

65. Two computers P and Q are configured as follows: P has IP address 203.197.2.53 and subnet mask 255.255.128.0, Q has IP address 203.197.75.201 and subnet mask 255.255.192.0. Which one of following option is true?

- (a) P assumes, Q is on same network, but Q assumes, P is on a different network
- (b) P and Q both assume they are on the same network
- (c) Q assumes, P is on same network, P assumes Q is on different network
- (d) P and Q both assume they are on different network

66. Which one of the following types of semiconductor memory is used as the main memory in a computer?

- (a) Static Random Access Memory (SRAM)
- (b) Dynamic Random Memory (DRAM)
- (c) Programmable Read-only Memory
- (d) Flash Memory

67. The pwd command in Linux, is used for

- (a) to find out the previous directory you were working in
- (b) to find out the directory in which presently you are working in
- (c) to find out the parent directory or present subdirectory
- (d) to set the new password

68. If one uses straight two-way merge sort algorithm to sort the following elements in ascending order

20, 47, 15, 8, 9, 4, 40, 30, 12, 17, then the order of these elements after the second pass of the algorithm is

- (a) 8, 9, 15, 20, 47, 4, 12, 17, 30, 40
- (b) 8, 15, 20, 47, 4, 9, 30, 40, 12, 17
- (c) 15, 20, 47, 4, 8, 9, 12, 30, 40, 17
- (d) 4, 8, 9, 15, 20, 47, 12, 17, 30, 40

69. Match following IC families with their basic circuits.

	List-I		List-II
(I)	TTL	(A)	NAND
(II)	ECL	(B)	NOR
(III)	CMOS	(C)	Inverter

- (a) (I)-(C), (II)-(B), (III)-(A)
- (b) (I)-(B), (II)-(C), (III)-(A)
- (c) (I)-(B), (II)-(A), (III)-(C)
- (d) (I)-(A), (II)-(B), (III)-(C)

70. Match List-I and List-II.

	List-I		List-II
(I)	Full Adder	(A)	Sequential Circuit
(II)	Direct Memory Access	(B)	Multiplication Technique
(III)	Latch	(C)	I/O Technique
(IV)	Booth Algorithm	(D)	Combinatorial Circuit

- (a) (I)-(B), (II)-(C), (III)-(D), (IV)-(A)
- (b) (I)-(D): (I)-(C), (III)-(A), (IV)-(B)
- (c) (I)-(D), (II)-(A), (III)-(B), (IV)-(C)
- (d) (I)-(B), (II)-(D), (III)-(A), (IV)-(C)

71. The values of x satisfying

$$|(x^2 - 4) - (x^2 + 2)| = |x^4 - 4| - |x^2 + 2| \text{ are}$$

- (a) $(-\infty, -3) \cup (3, \infty)$
- (b) $(-\infty, -\sqrt{3}) \cup [\sqrt{3}, \infty)$
- (c) $(-\infty, \sqrt{3}) \cup (\sqrt{3}, \infty)$
- (d) $(-\infty, -3] \cup [3, \infty)$

72. $\sin^{-1}\left(\frac{1+x^2}{2x}\right)$ is
 (a) Continuous but not differentiable at $x = 1$
 (b) Differentiable at $x = 1$
 (c) Neither continuous nor differentiable at $x = 1$
 (d) Continuous every where
73. A set contains $(2n+1)$ elements. The number of subset of the set which contain atmost n elements is
 (a) 2^n (b) 2^{n+1}
 (c) 2^{n-1} (d) 2^{2n}
74. The differential equation $x \frac{dy}{dx} - y = x^2$, has the general solution:
 (a) $y - x^2 = 2cx$ (b) $2y - x^3 = cx$
 (c) $2y + x^2 = 2cx$ (d) $y + x^2 = 2cx$
75. The linear transformation $T : \mathbb{R}^3 \rightarrow \mathbb{R}^4$ whose image is generated by $\{(1, 2, 0, -4) (2, 0, -1, -3)\}$ is
 (a) $T(x, y, z) = (x - 2y, x, -y, -4x - 3y)$
 (b) $T(x, y, z) = (x - 2y, -x, y, -4x - 3y)$
 (c) $T(x, y, z) = (x + 2y, -x, y, 4x + 3y)$
 (d) $T(x, y, z) = (x + 2y, 2x, -y, -4x - 3y)$
76. Let T be a linear transformation from a 3- dimensional vector space V into a 2-dimensional vector space W . Then, T
 (a) Can be both injective and surjective
 (b) Can be neither injective nor surjective
 (c) Can be surjective but cannot be injective
 (d) Can be injective but cannot be surjective
77. In the additive group of integers, the order of every element $a \neq 0$ is:
 (a) infinity (b) one
 (c) zero (d) None of these
78. The conditions on the matrix A for the Cholesky method to be applicable is
 (a) A is symmetric (b) Positive definite
 (c) Both (a) and (b) (d) For any matrix A
79. In Simpson's one-third rule, the curve $y = f(x)$ is assumed to be a
 (a) circle (b) parabola
 (c) hyperbola (d) None of these
80. If C be the boundary of the region $R = \{(x, y) \in \mathbb{R}^2 : -1 \leq y \leq 1, 0 \leq x \leq 1 - y^2\}$ oriented in the counter-clockwise direction. Then the value of $\int_C y dx + 2x dy$ is:
 (a) $-\frac{4}{3}$ (b) $-\frac{2}{3}$
 (c) $\frac{2}{3}$ (d) $\frac{4}{3}$
81. Consider the vector field $\vec{F} = (ax + y + a)\hat{i} + \hat{j} - (x + y)\hat{k}$, where 'a' is a constant. If $\vec{F} \cdot \text{Curl } \vec{F} = 0$. then the value of 'a' is:
 (a) -1 (b) 0
 (c) 1 (d) $\frac{2}{3}$
82. The locus of the lines through the vertex of a cone normal to the tangent planes is called
 (a) Rigla circular cone (b) Enveloping cone
 (c) Reciprocal conc (d) None of these
83. The centre of the sphere which passes through $(a, 0, 0)$, $(0, b, 0)$, $(0, 0, c)$ and $(0, 0, 0)$ is
 (a) $\left(\frac{a}{2}, 0, 0\right)$ (b) $\left(0, \frac{b}{2}, 0\right)$
 (c) $\left(0, 0, \frac{c}{2}\right)$ (d) $\left(\frac{a}{2}, \frac{b}{2}, \frac{c}{2}\right)$
84. Equation of circle whose centre is pole and radius is a:
 (a) $r = a$ (b) $r = 2a \cos \theta$
 (c) $r = 2a \sin \theta$ (d) None of these
85. The set of values of x for which $\frac{\tan 3x - \tan 2x}{1 + \tan 3x \tan 2x} = 1$ is
 (a) Φ
 (b) $\left\{\frac{\pi}{4}\right\}$
 (c) $\left\{n\pi + \frac{\pi}{4}, n = 1, 2, 3, \dots\right\}$
 (d) $\left\{2n\pi + \frac{\pi}{4}, n = 1, 2, 3, \dots\right\}$
86. In a poisson distribution, if $2P(X = 1) = P(X = 2)$ then the variance of X is:
 (a) 1 (b) 4
 (c) 9 (d) 16
 (A)-PAN)
87. IF $P(A) = 0.5$, $P(B) = 0.3$ and $P(A \cap B) = 0.15$, then the value of $P(A|\bar{B})$ is:
 (a) 0.3 (b) 0.45
 (c) 0.5 (d) 0.7

88. If the mean and standard deviation of a set of data is 25 and 20 respectively, then coefficient of variation is
(a) 50 (b) 40
(c) 80 (d) 20
89. Let X be a random sample from $U(0, \theta)$, $\theta > 0$ distribution. To test the hypothesis $H_0 : \theta = 1$ against $H_1 : \theta = 2$. If the critical region is $0.8 \leq X \leq 1.3$, then the probability of type I error is:
(a) 0.5 (b) 0.2
(c) 0.3 (d) 0.4
90. In LPP, the decision variables are
(a) Positive (b) Negative
(d) Integer (c) Non-negative
91. The sum of squares of deviations from mean is
(a) Maximum (b) Minimum
(c) Zero (d) One
92. Minimum limit of multiple correlation coefficient is:
(a) -1 (b) 0
(c) 1 (d) 15
93. Three fair coins are tossed simultaneously. The probability of getting at least one head is
(a) $\frac{1}{8}$ (b) 2
(c) $\frac{5}{8}$ (d) $\frac{7}{8}$
94. Three horses A, B and C are in race. A is twice as likely to win as B and B is twice as likely to win as C. What is the probability of winning the race by horse A.
(a) $\frac{1}{7}$ (b) $\frac{2}{7}$
(c) $\frac{3}{7}$ (d) $\frac{4}{7}$
95. Let X be a random variable with pdf, $f(x) = 12x(1-x)^2$, $0 < x < 1$. Then, the mean of X is
(a) $\frac{1}{2}$ (b) $\frac{2}{3}$
(c) $\frac{3}{5}$ (d) $\frac{2}{5}$
96. In a completely randomized design with 5 treatments and 7 homogeneous plots, the degree of freedom of error in ANOVA is:
(a) 2 (b) 4
(c) 5 (d) 6
97. The feasible region in an LPP, must be:
(a) Convex
(b) Concave
(c) (a) or (b)
(d) None of these
98. Which of the following is not associated with an LPP?
(a) Proportionality
(b) Uncertainty
(c) Additivity
(d) Divisibility
99. The first four moments of a distribution about mean of the variable are 0, 16, -64, 162. Then, the nature of the distribution is
(a) Leptokurtic
(b) Platykurtic
(c) Mesokurtic
(d) Symmetric
100. The product of two regression coefficients is known as:
(a) Coefficient of correlation
(b) Coefficient of variation
(c) Covariance
(d) Coefficient of determination

ANSWER KEY

1.	2.	3.	4.	5.
c	a	d	c	a
6.	7.	8.	9.	10.
b	d	b	c	b
11.	12.	13.	14.	15.
d	c	d	b	b
16.	17.	18.	19.	20.
d	b	c	b	c
21.	22.	23.	24.	25.
b	a	c	a	b
26.	27.	28.	29.	30.
d	d	c	a	d
31.	32.	33.	34.	35.
a	b	c	c	b
36.	37.	38.	39.	40.
a	d	a	b	c
41.	42.	43.	44.	45.
b	d	b	c	a
46.	47.	48.	49.	50.
b	c	b	c	c
51.	52.	53.	54.	55.
a	c	b	c	c
56.	57.	58.	59.	60.
a	b	c	a	c
61.	62.	63.	64.	65.
d	d	d	d	a
66.	67.	68.	69.	70.
b	b	b	d	b
71.	72.	73.	74.	75.
b	c	d	b	a
76.	77.	78.	79.	80.
c	a	c	b	d
81.	82.	83.	84.	85.
c	c	d	a	a
86.	87.	88.	89.	90.
b	c	c	b	c
91.	92.	93.	94.	95.
b	b	d	d	d
96.	97.	98.	99.	100.
a	a	b	b	d

48* (II Only)

71* (b) $(-\infty, -\sqrt{3}] [\sqrt{3}, \infty)$
